

**Simon Davis**  
Portfolio Manager  
(industry since 1988)

**Objective**

The fund seeks capital appreciation.

**Current unit value**

Class IA \$14.94  
Class IB \$14.77

**Number of holdings**

85

**Net assets**

\$272.41M

# Putnam VT International Equity Fund

Pursuing the growth potential of overseas markets

**International companies**

The fund invests in established large and midsize companies, mainly in developed markets to benefit from opportunities outside the United States.

**A flexible strategy**

Pursuing Putnam's blend strategy, the fund can own growth- or value-style stocks to participate when either style leads international markets.

**A disciplined process**

The portfolio manager invests using fundamental research and quantitative tools supported by strong risk controls in portfolio construction.

**Diversification across many markets and currencies**

● Japan	20.0%
● United Kingdom	15.5
● Germany	13.8
● France	11.9
● Netherlands	8.8
● United States	3.4
● Other countries	25.1
● Cash and net other assets	1.6

Allocations will vary over time. Due to rounding, percentages may not equal 100%.

**Top ten holdings**

ING Groep
Bayer
Siemens
Prudential
Unilever
Total
Orix
Rio Tinto (UK)
Sanofi
Sony

Holdings represent 20.0% of the portfolio and will vary over time.

**Growth of a \$10,000 investment**

The fund has returned an average of 6.0% annually since inception. (Class IB)

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. All total return figures are at net asset value. The charges and expenses of the insurance company separate account level are not reflected. Performance for class IB shares for periods prior to their inception is based on class IA shares, adjusted to reflect the fees paid by class IB shares including a 12b-1 fee of 0.25%. To obtain the most recent month-end performance, contact your variable annuity provider, who has more information about their variable annuity and variable life products that invest in Putnam managed products. For a portion of the period, this fund limited expenses, without which returns would have been lower.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. All total return figures are at net asset value. The charges and expenses of the insurance company separate account level are not reflected. Performance for class IB shares for periods prior to their inception is based on class IA shares, adjusted to reflect the fees paid by class IB shares including a 12b-1 fee of 0.25%. Class IA shares are offered at net asset value and are not subject to a distribution fee. Class IB shares are offered at net asset value and pay an ongoing distribution fee. To obtain the most recent month-end performance, contact your variable annuity provider, who has more information about their variable annuity and variable life products that invest in Putnam-managed products. For a portion of the period, this fund limited expenses, without which returns would have been lower.

The MSCI EAFE Index (ND) is an unmanaged index of equity securities from developed countries in Western Europe, the Far East, and Australasia. You cannot invest directly in an index.

Lipper rankings for class IB shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Lipper. Variable annuities are long-term investment vehicles intended for retirement planning. Annuities have insurance related charges and tax considerations, and are offered by contract only.

**Standard deviation** measures how widely a set of values varies from the mean. It is a historical measure of the variability of return earned by an investment portfolio over a 3-year period. **Beta** measures volatility in relation to the fund's benchmark. A beta of less than 1.0 indicates lower volatility; a beta of more than 1.0, higher volatility than the benchmark. The **price-earnings ratio** of a firm's common stock is calculated as the current stock price divided by projected earnings per share for the coming year. The projections used are based on street consensus estimates provided by IBES. **Earnings per share** (EPS) growth is found by taking the net income and dividing it by the basic or diluted number of shares outstanding, as reported.

**Consider these risks before investing:** International investing involves currency, economic, and political risks. Emerging-market securities carry illiquidity and volatility risks. Investments in small and/or midsize companies increase the risk of greater price fluctuations. Growth stocks may be more susceptible to earnings disappointments, and value stocks may fail to rebound. Stock prices may fall or fail to rise over time for a variety of reasons, including general financial market conditions and factors related to a specific issuer or industry. Risks associated with derivatives include increased investment exposure (which may be considered leverage) and, in the case of over-the-counter instruments, the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. You can lose money by investing in the fund.

**Your clients should carefully consider the investment objective, risks, charges, and expenses of a fund before investing. For a prospectus containing this and other information for any variable annuity or variable life product that invests in Putnam managed products, call Putnam Dealer Marketing Services at 1-800-354-4000. Your clients should read the prospectus carefully before investing**
