Putnam Convertible Securities Fund

Offering investors the diverse benefits of convertible securities since 1972

Balanced profile

The fund seeks to achieve an equilibrium balancing much of the upside potential of equities, the lower downside risk of bonds, and an attractive current yield.

Effective diversification

The fund offers diversification potential for investor portfolios: Convertible securities may provide more attractive risk-adjusted returns than stocks and have near zero correlation with aggregate bond strategies.

Joint venture

Uniquely combining both dedicated fixed income and equity expertise to enhance the ability to fully exploit these hybrid securities.

Top 10 holdings

Palo Alto Networks	3.20%

Sources: Bloomberg Index Services Limited; Putnam, as of 3/31/22. All returns are annualized. Fund performance is shown net of fees. Indexes are unmanaged and do not incur expenses. You cannot invest directly in an index. Past performance is not a guarantee of future results.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class A and Y shares assumes reinvestment of distributions and does not account for taxes. After-sales-charge returns for class A reflect a maximum 4.00% load. Returns for class Y shares prior to their inception are derived from the historical performance of class A shares, which have not been adjusted for their lower expenses; had they, returns would have been higher. Class Y shares, available to investors through an asset-based fee program or for institutional clients, are sold without an initial sales charge and have no CDSC. The ICE BofA (Intercontinental Exchange Bank of America) U.S. Convertible Index tracks the performance of publicly issued U.S. dollar-denominated convertible securities of U.S. companies. The Lipper Convertible Securities Funds Average is an arithmetic average of the total return of all Lipper Convertible Securities Funds. ICE Data Indices, LLC (ICE BofA), used with permission. ICE BofA permits use of the ICE BofA indices and related data on an "as is" basis; makes no warranties regarding same; does not guarantee the suitability, quality, accuracy, timeliness, and/or completeness of the ICE BofA indices or any data included in, related to, or derived therefrom; assumes no liability in connection with the use of the foregoing; and does not sponsor, endorse, or recommend Putnam Investments, or any of its products or services. You cannot invest directly in an index.

Morningstar rankings for class Y shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Morningstar. Morningstar rankings may differ significantly from Morningstar's risk-adjusted star ratings. Past performance is not indicative of future results.

Beta is defined as a fund's sensitivity to market movements and is used to evaluate market related, or systematic, risk. It is a historical measure of the variability of return earned by an investment portfolio. Risk statistics are measured using a 3-year regression analysis. For funds with shorter track records, since inception analysis is used.

Diversification does not guarantee a profit or ensure against loss. It is possible to lose money in a diversified portfolio.

Not all share classes are available on all platforms.

Consider these risks before investing: The value of investments in the fund's portfolio may fall or fail to rise over extended periods of time for a variety of reasons, including general economic, political, or financial market conditions; investor sentiment and market perceptions; government actions; geopolitical events or changes; and factors related to a specific issuer, asset class, geography, industry, or sector. These and other factors may lead to increased volatility and reduced liquidity in the fund's portfolio holdings.

These risks are generally greater for convertible securities issued by small and/or midsize companies. Convertible securities' prices may be adversely affected by underlying common stock price changes. While convertible securities tend to provide higher yields than common stocks, the higher yield may not protect against the risk of loss or mitigate any loss associated with a convertible security's price decline. Convertible securities are subject to credit risk, which is the risk that an issuer of the fund's investments may default on payment of interest or principal. Credit risk is generally greater for below-investment-grade convertible securities. Convertible securities may be less sensitive to interest-rate changes than non-convertible bonds because of their structural features (e.g., convertibility, "put" features). Interest-rate risk is generally greater, however, for longer-term bonds and convertible securities whose underlying stock price has fallen significantly below the conversion price.

Our investment techniques, analyses, and judgments may not produce the intended outcome, and the investments we select for the fund may not perform as well as other securities that were not selected for the fund. We, or the fund's other service providers, may experience disruptions or operating errors that could negatively impact the fund. You can lose money by investing in the fund.
