

**Objective**

The fund seeks high current income with preservation of capital as its secondary objective.

**Portfolio Managers**

**Michael V. Salm**  
(industry since 1989)

**Jatin Misra PhD, CFA**  
(industry since 2004)

**Morningstar category**

Intermediate Government

**Lipper category**

General U.S. Government

Credit qualities are shown as a percentage of the fund's net assets. A bond rated BBB or higher (A-3 or higher, for short-term debt) is considered investment grade. This chart reflects the highest security rating provided by one or more of Standard & Poor's, Moody's, and Fitch. To-be-announced (TBA) mortgage commitments, if any, are included based on their issuer ratings. Ratings may vary over time. Cash, derivative instruments, and net other assets are shown in the not-rated category. Payables and receivables for TBA mortgage commitments are included in the not-rated category and may result in negative weights. **The fund itself has not been rated by an independent rating agency.**

# Putnam American Government Income Fund

Pursuing income and capital preservation with a range of government bonds

**High credit quality**

The fund invests mainly in government bonds with the highest credit rating, AAA.

**Diversified approach**

By including investments in government, mortgage-backed, and asset-backed securities, the fund seeks an attractive level of income along with capital preservation.

**Leading research**

The fund's managers use proprietary models to evaluate mortgage-backed bonds and to manage the fund's interest-rate risk.

**Diversification across bond market sectors**

Agency pass-through	43.2%
Agency CMO	32.7
U.S. Treasury/agency	25.1
Asset-backed securities (ABS)	0.6
Net cash	6.1

**Maturity breakdown**

0 to 1 year	-1.8%
1 to 5 years	8.5
5 to 10 years	72.1
10 to 15 years	6.2
Over 15 years	15.2

**Portfolio quality**

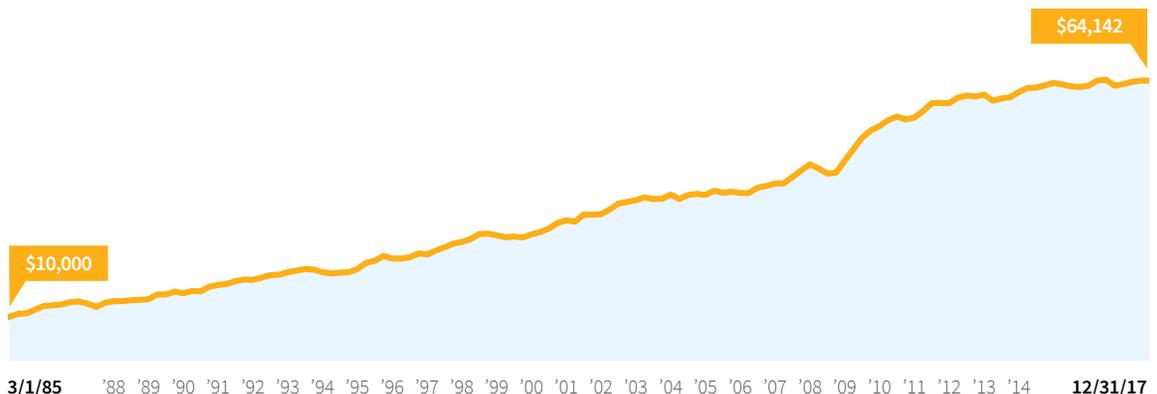

AAA	100.9%
A	6.4
Not rated	-7.3

Holdings represent 100% of the portfolio and will vary over time

Allocations will vary over time. Allocations may not total 100% of net assets because the table includes the notional value of derivatives (the economic value for purposes of calculating periodic payment obligations), in addition to the market value of securities.

**Growth of a \$10,000 investment**

With dividends reinvested, the fund has returned an average of 5.8% annually since inception.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class Y shares assumes reinvestment of distributions and does not account for taxes. Class Y shares, available to investors through an asset-based fee program or for institutional clients, are sold without an initial sales charge and have no CDSC. Performance for class Y shares before their inception are derived from the historical performance of class A shares (inception 3/1/85), which have not been adjusted for the lower expenses; had they, returns would have been higher. For the most recent month-end performance, please visit putnam.com.

<sup>†</sup>Based on annualized returns for quarterly rolling periods.

The Bloomberg (BBG) Barclays Government Bond Index is an unmanaged index of U.S. Treasury and government agency bonds. You cannot invest directly in an index.

Lipper rankings for class Y shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Lipper.

**Average effective duration** provides a measure of a fund's interest-rate sensitivity. The longer a fund's duration, the more sensitive the fund is to shifts in interest rates.

Not all share classes are available on all platforms.

**Consider these risks before investing:** Funds that invest in government securities are not guaranteed. Mortgage-backed securities are subject to prepayment risk and the risk that they may increase in value less when interest rates decline and decline in value more when interest rates rise. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Interest-rate risk is greater for longer-term bonds, and credit risk is greater for debt not backed by the full faith and credit of the U.S. government. Risks associated with derivatives include increased investment exposure (which may be considered leverage) and, in the case of over-the-counter instruments, the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. Unlike bonds, funds that invest in bonds have fees and expenses. Bond prices may fall or fail to rise over time for several reasons, including general financial market conditions, changing market perceptions (including perceptions about the risk of default and expectations about monetary policy or interest rates), changes in government intervention in the financial markets, and factors related to a specific issuer or industry. These and other factors may lead to increased volatility and reduced liquidity in the fund's portfolio holdings. You can lose money by investing in the fund.

**Request a prospectus or a summary prospectus, if available, from your financial representative or by calling Putnam at 1-800-225-1581. These prospectuses include investment objectives, risks, fees, expenses, and other information that you should read and consider carefully before investing.**
