

The fund received a 4-star Overall Morningstar Rating as of 6/30/20 among 187 funds in the World Bond category (A shares, based on risk-adjusted returns)

**Objective**

The fund seeks high current income by investing principally in debt securities of sovereign and private issuers worldwide, including supranational issuers. Preservation of capital and long-term total return are secondary objectives, but only to the extent consistent with the objective of seeking high current income.

World Bond

**Lipper category**

Global Income

Credit qualities are shown as a percentage of the fund's net assets. A bond rated BBB or higher (A-3 or higher, for short-term debt) is considered investment grade. This chart reflects the highest security rating provided by one or more of Standard & Poor's, Moody's, and Fitch. To-be-announced (TBA) mortgage commitments, if any, are included based on their issuer ratings. Ratings may vary over time. Cash, derivative instruments, and net other assets are shown in the not-rated category. Payables and receivables for TBA mortgage commitments are included in the not-rated category and may result in negative weights. **The fund itself has not been rated by an independent rating agency.**

**Not FDIC insured

No bank guarantee**

# Putnam Global Income Trust (PGIX)

Seeking attractive bond investments across world markets since 1987

**Worldwide opportunities**

The fund's managers search for attractive income securities from a broad range of sectors in U.S. and international markets.

**Flexible risk allocations**

The fund takes a unique approach to asset allocation, dynamically establishing diversified risk exposures rather than sector exposures.

**Bottom-up approach**

Security selection is the primary driver of returns, with sub-sector allocations and macro strategies also serving as potential alpha generators.

**Pursuing opportunities inside and outside the benchmark**

Portfolio quality		Sector		● Fund	● BBG Barclays Global Aggr. Bond Index
AAA	45.8%	Agency pass-through	29.1%	10.7%	
AA	10.5	International Treasury/agency	28.2	40.4

		Municipal bonds	0.0	0.3	
		Covered bonds	0.0	2.2	
		U.S. Treasury/agency	0.0	15.3	

Holdings represent 100% of the portfolio and will vary over time. Negative weights may result from timing differences between trade and settlement dates of securities, such as TBAs, or by the use of derivatives.

Net cash represents 6.1% of the portfolio. 40.8% of the portfolio invested internationally. Allocations will vary over time.

Fund allocations may not total 100% of net assets because the table includes the notional value of the derivatives (the economic value for purposes of calculating periodic payment obligations), in addition to the market value of securities.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class A shares assumes reinvestment of distributions and does not account for taxes. After-sales-charge returns reflect a maximum 4.00% load. For the most recent month-end performance, please visit [putnam.com](http://putnam.com).

The Bloomberg (BBG) Barclays Global Aggregate Bond Index is an unmanaged index of global investment-grade fixed-income securities. You cannot invest directly in an index. You cannot invest directly in an index. The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account the effects of sales charges and loads. Putnam Global Income Trust received 3, 3, and 4 stars for the 3-, 5-, and 10-year periods among 187, 171, and 114 World Bond funds, respectively.

Not all share classes are available on all platforms.

Morningstar rankings for class A shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Morningstar. Morningstar rankings may differ significantly from Morningstar's risk-adjusted star ratings. Past performance is not indicative of future results.

**Standard deviation** measures how widely a set of values varies from the mean. It is a historical measure of the variability of return earned by an investment portfolio. **Average effective maturity** depends on the maturity of the underlying bonds within each fund. The longer the maturity, the greater the interest-rate risk. **Average effective duration** provides a measure of a fund's interest-rate sensitivity. The longer a fund's duration, the more sensitive the fund is to shifts in interest rates.

**Consider these risks before investing:** International investing involves currency, economic, and political risks. Emerging-market securities carry illiquidity and volatility risks. Lower-rated bonds may offer higher yields in return for more risk. Funds that invest in government securities are not guaranteed. Mortgage-backed investments, unlike traditional debt investments, are subject to prepayment risk, which means that they may increase in value less than other bonds when interest rates decline and decline in value more than other bonds when interest rates rise. The fund concentrates on a limited group of industries and is non-diversified. Because the fund may invest in fewer issuers than a diversified fund, it is vulnerable to common economic forces and may result in greater losses and volatility. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Interest-rate risk is generally greater for longer-term bonds, and credit risk is generally greater for below-investment-grade bonds. Risks associated with derivatives include increased investment exposure (which may be considered leverage) and, in the case of over-the-counter instruments, the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. Unlike bonds, funds that invest in bonds have fees and expenses. The value of investments in the fund's portfolio may fall or fail to rise over extended periods of time for a variety of reasons, including general economic, political, or financial market conditions; investor sentiment and market perceptions; government actions; geopolitical events or changes; and factors related to a specific issuer, geography, industry, or sector. These and other factors may lead to increased volatility and reduced liquidity in the fund's portfolio holdings. Our investment techniques, analyses, and judgments may not produce the outcome we intend. The investments we select for the fund may not perform as well as other securities that we do not select for the fund. We, or the fund's other service providers, may experience disruptions or operating errors that could have a negative effect on the fund. You can lose money by investing in the fund.
