Putnam Dynamic Asset Allocation Growth Fund

A globally diversified fund pursuing growth

More than 10 asset classes

The fund holds a variety of investments in all market conditions to be positioned to benefit from a wide range of opportunities.

Individual securities

The managers select individual stocks and bonds, not other funds, to finely tune the portfolio and avoid overlap in holdings.

Active rebalancing

The managers proactively pursue opportunities and regularly rebalance the portfolio to maintain a consistent risk profile.

A flexible stock-bond mix

Stocks	
● U.S. large-cap equity	40.9%
● U.S. small- and mid-cap equity	18.8%
● International equity	15.9%
● Emerging-markets equity	5.1%
Bonds	
● U.S. investment-grade bonds	11.0%
● U.S. high-yield bonds	5.9%
● U.S. money markets	2.4%

Allocations will vary over time. Due to rounding, percentages may not equal 100%.

Holdings represent 11.4% of the portfolio and will vary over time.

Growth of a \$10,000 investment

The fund has returned an average of 7.7% annually since inception.

**Not FDIC insured
May lose value
No bank guarantee**

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class A shares assumes reinvestment of distributions and does not account for taxes. Returns do not reflect a 5.75% sales charge; had they, returns would have been lower. To obtain the most recent month-end performance, visit putnam.com.

The fund received a 4-star Overall Morningstar Rating™ as of 3/31/17 among 347 funds in the Allocation—70% to 85% Equity category (A shares, based on risk-adjusted returns)

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class A shares before sales charge assumes reinvestment of distributions and does not account for taxes. After-sales-charge returns reflect a maximum 5.75% load. To obtain the most recent month-end performance, visit putnam.com.

Highlights of five-year performance periods (2/8/94–3/31/17)*

Best 5-year return	Best period end date	Worst 5-year return	Worst period end date	Average 5-year return	% of 5-year periods with positive returns	Number of positive 5-year periods	Number of negative 5-year periods
20.18%	12/31/99	-3.64%	3/31/09	6.97%	88%	64	9

* Based on annualized returns before sales charges for quarterly rolling periods.

The Russell 3000 Index is an unmanaged index of the 3,000 largest U.S. companies. Frank Russell Company is the source and owner of the trademarks, service marks and copyrights related to the Russell Indexes. Russell® is a trademark of Frank Russell Company. You cannot invest directly in an index.

Lipper rankings for class A shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Lipper. **Beta** measures volatility in relation to the fund's benchmark. A beta of less than 1.0 indicates lower volatility; a beta of more than 1.0, higher volatility than the benchmark. **Standard deviation** measures how widely a set of values varies from the mean. It is a historical measure of the variability of return earned by an investment portfolio over a 3-year period.

For each fund with at least a three-year history, Morningstar calculates two sets of ratings based on a fund's monthly performance, placing more emphasis on downward variations and rewarding consistent performance. Risk-Adjusted Ratings reflect the effects of sales charges, loads, and redemption fees; Load-Waived Ratings exclude those effects. Load-Waived Ratings should only be used by investors not subject to the sales charge. Load-waived share classes are for qualified plan participants only (e.g., plan participants of a defined contribution plan). The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. (Each share class is counted as a fraction of one fund within this scale and rated separately, which may cause slight variations in the distribution percentages.) The Overall Morningstar Rating for a fund is derived from a weighted average of the performance figures associated with its 3-, 5-, and 10-year (if applicable) Morningstar Rating metrics. Data is historical. Past performance is no guarantee of future results. Morningstar Ratings shown are for class A shares class only; other classes may have different performance characteristics.

Putnam Dynamic Asset Allocation Growth Fund received 5, 5, and 3 stars for the 3-, 5-, and 10-year periods among 347, 286, and 216 Allocation—70% to 85% Equity funds, respectively.

Not all share classes available on all platforms.

Consider these risks before investing: Allocation of assets among asset classes may hurt performance. Stock and bond prices may fall or fail to rise over time for several reasons, including general financial market conditions, factors related to a specific issuer or industry and, with respect to bond prices, changing market perceptions of the risk of default and changes in government intervention. These factors may also lead to increased volatility and reduced liquidity in the bond markets. International investing involves currency, economic, and political risks. Emerging-market securities carry illiquidity and volatility risks. Investments in small and/or midsize companies increase the risk of greater price fluctuations. Growth stocks may be more susceptible to earnings disappointments, and value stocks may fail to rebound. Funds that invest in government securities are not guaranteed. Mortgage-backed securities are subject to prepayment risk and the risk that they may increase in value less when interest rates decline and decline in value more when interest rates rise. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Default risk is generally higher for non-qualified mortgages. Interest-rate risk is greater for longer-term bonds, and credit risk is greater for below-investment-grade bonds. Unlike bonds, funds that invest in bonds have fees and expenses. The use of derivatives may increase these risks by increasing investment exposure (which may be considered leverage) or, in the case of over-the-counter instruments, because of the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. You can lose money by investing in the fund.

Request a prospectus or a summary prospectus, if available, from your financial representative or by calling Putnam at 1-800-225-1581. These prospectuses include investment objectives, risks, fees, expenses, and other information that you should read and consider carefully before investing.
