Putnam Dynamic Asset Allocation Growth Fund

A globally diversified fund pursuing growth

More than 10 asset classes

The fund holds a variety of investments in all market conditions to be positioned to benefit from a wide range of opportunities.

Individual securities

The managers select individual stocks and bonds, not other funds, to finely tune the portfolio and avoid overlap in holdings.

Active rebalancing

The managers proactively pursue opportunities and regularly rebalance the portfolio to maintain a consistent risk profile.

A flexible stock-bond mix

Stocks	
● U.S. large-cap equity	43.7%
● U.S. small- and mid-cap equity	17.8
● International equity	17.4
● Emerging-market equity	5.3
Bonds	
● U.S. investment-grade bonds	10.1
● U.S. high-yield bonds	5.8

Allocations will vary over time. Due to rounding, percentages may not equal 100%

Top ten holdings

- Apple
- Alphabet
- Microsoft
- JPMorgan Chase
- Johnson & Johnson
- Citigroup
- GNMA TBA 3.50% 03/20/2047
- UnitedHealth Group
- Verizon
- Gilead Sciences

Holdings represent 12.7% of the portfolio and will vary over time.

Growth of a \$10,000 investment

The fund has returned an average of 7.8% annually since inception.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class A shares assumes reinvestment of distributions and does not account for taxes. Returns do not reflect a 5.75% sales charge; had they, returns would have been lower. For the most recent month-end performance, please visit putnam.com.

**Not FDIC insured
May lose value
No bank guarantee**

The fund received a 4-star Overall Morningstar Rating as of 6/30/17 among 334 funds in the Allocation--70% to 85% Equity category (A shares, based on risk-adjusted returns)

Lipper rankings

(A shares, based on total return)

1 year	8% (38/516)
3 years	14% (63/461)
5 years	3% (11/428)
10 years	36% (115/320)

Total expense ratio

(A shares)
1.11%

Beta

0.85

Standard deviation

9.03

Beta measures volatility in relation to the fund's benchmark. A beta of less than 1.0 indicates lower volatility; a beta of more than 1.0, higher volatility than the benchmark. **Standard deviation** measures how widely a set of values varies from the mean. It is a historical measure of the variability of return earned by an investment portfolio. For fixed income and equity funds, risk statistics are measured using a 3 and 5-year regression analysis respectively. For funds with shorter track records, Since Inception analysis is used. Not all share classes available on all platforms.

*Based on annualized returns for quarterly rolling periods.

The Russell 3000 Index is an unmanaged index of the 3,000 largest U.S. companies. Frank Russell Company is the source and owner of the trademarks, service marks, and copyrights related to the Russell Indexes. Russell® is a trademark of Frank Russell Company. You cannot invest directly in an index.

The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Putnam Dynamic Asset Allocation Growth Fund received 5, 5, and 3 stars for the 3-, 5-, and 10-year periods among 334, 291, and 210 Allocation--70% to 85% Equity funds, respectively.

Lipper rankings for class A shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Lipper.

Consider these risks before investing: Allocation of assets among asset classes may hurt performance. Stock and bond prices may fall or fail to rise over time for several reasons, including general financial market conditions, factors related to a specific issuer or industry and, with respect to bond prices, changing market perceptions of the risk of default and changes in government intervention. These factors may also lead to increased volatility and reduced liquidity in the bond markets. International investing involves currency, economic, and political risks. Emerging-market securities carry illiquidity and volatility risks. Investments in small and/or midsize companies increase the risk of greater price fluctuations. Growth stocks may be more susceptible to earnings disappointments, and value stocks may fail to rebound. Funds that invest in government securities are not guaranteed. Mortgage-backed investments, unlike traditional debt investments, are also subject to prepayment risk, which means that they may increase in value less than other bonds when interest rates decline and decline in value more than other bonds when interest rates rise. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Default risk is generally higher for non-qualified mortgages. Interest-rate risk is greater for longer-term bonds, and credit risk is greater for below-investment-grade bonds. Unlike bonds, funds that invest in bonds have fees and expenses. The use of derivatives may increase these risks by increasing investment exposure (which may be considered leverage) or, in the case of over-the-counter instruments, because of the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. You can lose money by investing in the fund.

Request a prospectus or a summary prospectus, if available, from your financial representative or by calling Putnam at 1-800-225-1581. These prospectuses include investment objectives, risks, fees, expenses, and other information that you should read and consider carefully before investing.
