Putnam Growth Opportunities Fund

Seeking to harness the growth potential of large U.S. companies

Seeks above-average growth

The fund focuses on businesses that exhibit both a high level of growth and an above-average duration of growth.

A thematic approach

The portfolio managers combine top-down investment themes with bottom-up research to select securities that can benefit from growth trends.

Rigorous analysis

Backed by fundamental research, the managers focus on identifying management teams that act like owners.

Fundamental investment research determines top holdings and sector weightings

Top ten holdings		Sector	● Fund	● Russell 1000 Growth Index
Microsoft	8.01%	Information technology	30.4%	31.5%
Alphabet	6.59	Health care	15.7	14.3
Apple	5.63	Communication services	13.6	11.9
Amazon	4.39	Industrials	13.6	11.8
Visa	4.22	Consumer discretionary	9.7	15.1
PayPal	2.99	Materials	4.4	1.8
UnitedHealth Group	2.91	Financials	3.3	4.4
American Tower	2.59	Consumer staples	3.0	6.0
Boeing	2.57	Real estate	2.6	2.3
Salesforce.com	2.54	Energy	0.0	0.8

Holdings represent 42.44% of the portfolio and will vary over time.

Cash and net other assets represent 3.7% of the portfolio.

Growth of a \$10,000 investment

The fund has returned an average of 7.7% annually since inception.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class A shares assumes reinvestment of distributions and does not account for taxes. Returns do not reflect a 5.75% sales charge; had they, returns would have been lower. Recent performance may have benefited from one or more legal settlements. For the most recent month-end performance, please visit putnam.com.

Because the dollar amount of the monthly performance fee adjustment is based on the fund's average assets during the rolling performance period, the amount of any dollar adjustment as a percentage of a fund's current assets could exceed the "maximum annualized performance adjustment rates." Performance fee adjustments will not commence until a fund has been operating under a shareholder-approved management contract with a performance fee adjustment for at least 12 months.

The Morningstar Rating™ for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Ratings do not take into account the effects of sales charges and loads. Putnam Growth Opportunities Fund received 5, 4, and 4 stars for the 3-, 5-, and 10-year periods among 1,247, 1,107, and 799 Large Growth funds, respectively.

Lipper rankings for class A shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Lipper.

Earnings per share (EPS) is found by taking the net income and dividing it by the basic or diluted number of shares outstanding, as reported. You can also take "expected" earnings for the current year or for future years to calculate other P/E ratios. The **price-earnings ratio** of a firm's common stock is calculated as the current stock price divided by projected earnings per share for the coming year. The projections used are based on street consensus estimates provided by IBES. **Beta** is defined as a fund's sensitivity to market movements and is used to evaluate market related, or systematic, risk. It is a historical measure of the variability of return earned by an investment portfolio. Risk statistics are measured using a 5-year regression analysis. For funds with shorter track records, Since Inception analysis is used.

Not all share classes are available on all platforms.

Consider these risks before investing: Growth stocks may be more susceptible to earnings disappointments, and the market may not favor growth-style investing. Stock prices may fall or fail to rise over time for several reasons, including general financial market conditions, changing market perceptions, changes in government intervention in the financial market, and factors related to a specific issuer, industry, or sector. These and other factors may lead to increased volatility and reduced liquidity in the fund's portfolio holdings. From time to time, the fund may invest a significant portion of its assets in companies in one or more related industries or sectors, which would make the fund more vulnerable to adverse developments affecting those industries or sectors. You can lose money by investing in the fund.
