**Growth of a \$10,000 investment**

The fund has returned an average of 9.8% annually since inception. Plotted on a logarithmic scale so that comparable percentage changes appear similar.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class Y shares assumes reinvestment of distributions and does not account for taxes. Class Y shares, available to investors through an asset-based fee program or for institutional clients, are sold without an initial sales charge and have no CDSC. Performance for class Y shares before their inception are derived from the historical performance of class A shares (inception 11/1/99), which have not been adjusted for the lower expenses; had they, returns would have been higher. As of March 21, 2018, the Russell Midcap Growth Index replaced the Russell 3000 Value Index as the benchmark for this fund because, in Putnam Investment Management, LLC's opinion, the securities tracked by this index more accurately reflect the types of securities that generally will be held by the fund. The Russell 3000 Value Index is an unmanaged index of those companies in the broad-market Russell 3000 Index chosen for their value orientation. The Russell Midcap Growth Index is an unmanaged index of those companies in the Russell Midcap Index chosen for their growth orientation. The Russell 3000 Value - Russell Midcap Growth Linked Benchmark represents performance of the Russell 3000 Value Index through March 20, 2018 and performance of the Russell Midcap Growth Index thereafter. Lipper rankings for class Y shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Lipper.

**Beta** measures volatility in relation to the fund's benchmark. A beta of less than 1.0 indicates lower volatility; a beta of more than 1.0, higher volatility than the benchmark. The **price-earnings ratio** of a firm's common stock is calculated as the current stock price divided by projected earnings per share for the coming year. The projections used are based on street consensus estimates provided by IBES. **Earnings per share** (EPS) is found by taking the net income and dividing it by the basic or diluted number of shares outstanding, as reported. You can also take “expected” earnings for the current year or for future years to calculate other P/E ratios.

Not all share classes are available on all platforms.

**Consider these risks before investing:** Stock values may fall or fail to rise over time for several reasons, including general financial market conditions and factors related to a specific issuer or industry. Growth stocks may be more susceptible to earnings disappointments, and the market may not favor growth-style investing. Investments in small and/or midsize companies increase the risk of greater price fluctuations. The fund's sustainable investment strategy limits the types and number of investment opportunities available to the fund and, as a result, the fund may underperform other funds that do not have a sustainable focus. A fund's environmental, social, and/or corporate governance (ESG) investment strategy may result in the fund investing in securities or industry sectors that underperform the market as a whole or underperform other funds screened for ESG standards. You can lose money by investing in the fund.
