# Putnam Short Duration Bond Fund

Pursuing income with a multi-sector, lower duration approach

**Sector diversification**

The fund invests in a diversified portfolio of fixed-income securities, including corporate debt, bank loans, sovereign debt, and securitized assets, such as mortgage-backed and asset-backed securities.

**Managing rate sensitivity**

The fund invests in short-term bonds and other securities, and generally maintains an effective duration, or interest-rate sensitivity, of three years or less.

**Fundamental approach**

The fund's experienced portfolio managers implement active strategies that consider several factors, including credit, interest-rate, and prepayment risks, and general market conditions.

**Pursuing opportunities inside and outside the benchmark**

**Portfolio quality**

● AAA	17.2%
● AA	12.2
● A	34.4
● BBB	22.5
● BB	3.1
● B	1.4
● CCC and below	2.5
● Not rated	6.7

Holdings represent 100% of the portfolio and will vary over time.

Credit qualities are shown as a percentage of the fund's net assets. A bond rated BBB or higher (A-3 or higher, for short-term debt) is considered investment grade. This chart reflects the highest security rating provided by one or more of Standard & Poor's, Moody's, and Fitch. To-be-announced (TBA) mortgage commitments, if any, are included based on their issuer ratings. Ratings may vary over time. Cash, derivative instruments, and net other assets are shown in the not-rated category. Payables and receivables for TBA mortgage commitments are included in the not-rated category and may result in negative weights.

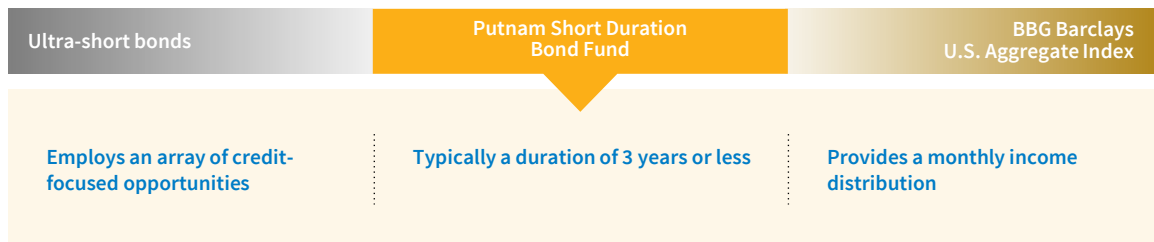

**The fund itself has not been rated by an independent rating agency.**

**Portfolio composition**

Investment-grade corporate bonds	44.9%
Commercial MBS	22.3
Agency CMO	7.7
Residential MBS (non-agency)	5.6
Asset-backed securities (ABS)	4.5
Agency pass-through	2.6
Emerging-market bonds	1.1
High-yield corporate bonds	0.1
Net cash	16.0

Allocations may not total 100% of net assets because the table includes the notional value of derivatives (the economic value for purposes of calculating periodic payment obligations), in addition to the market value of securities.

**Putnam Short Duration Bond Fund focuses on total return with less interest-rate sensitivity**

Prior to June 1, 2018, the fund was known as Putnam Absolute Return 100 Fund. Performance related data, which includes periods prior to June 1, 2018, reflect the fund's previous investment strategy.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class Y shares assumes reinvestment of distributions and does not account for taxes. Class Y shares, available to investors through an asset-based fee program or for institutional clients, are sold without an initial sales charge and have no CDSC. For a portion of the periods, the fund had expense limitations, without which returns would have been lower. For the most recent month-end performance, please visit [putnam.com](http://putnam.com).

As of June 1, 2018, the ICE BofAML 1-3 year Corporate Credit Index replaced the ICE BofAML U.S. Treasury Bill Index as the benchmark for this fund because, in Putnam Investment Management, LLC's opinion, the securities tracked by this index more accurately reflect the types of securities that generally will be held by the fund. The ICE BofAML 1-3 year Corporate Credit Index is an unmanaged index of U.S. investment-grade corporate debt with a remaining term to maturity of less than 3 years. The ICE BofAML U.S. Treasury Bill Index is an unmanaged index that tracks the performance of U.S.-dollar-denominated U.S. Treasury bills publicly issued in the U.S. domestic market. Qualifying securities must have a remaining term of at least one month to final maturity and a minimum amount outstanding of \$1 billion. The ICE BofAML 1-3 year Corporate Credit - ICE BofAML U.S. Treasury Bill Linked Benchmark represents performance of the ICE BofAML U.S. Treasury Bill Index through June 1, 2018, and performance of the ICE BofAML 1-3 year Corporate Credit Index thereafter. ICE Data Indices, LLC (ICE BofAML), used with permission. ICE BofAML permits use of the ICE BofAML indices and related data on an "as is" basis; makes no warranties regarding same; does not guarantee the suitability, quality, accuracy, timeliness, and/or completeness of the ICE BofAML indices or any data included in, related to, or derived therefrom; assumes no liability in connection with the use of the foregoing; and does not sponsor, endorse, or recommend Putnam Investments, or any of its products or services. You cannot invest directly in an index. Not all share classes are available on all platforms.

**Consider these risks before investing:** Allocation of assets among fixed-income strategies and sectors may hurt performance. Bond prices may fall or fail to rise over extended periods of time for a variety of reasons, including general financial market conditions, changing market perceptions of the risk (including perceptions about default and expectations about monetary policy or interest rates), changes in government intervention in the financial markets, and factors related to a specific issuer or industry. These and other factors may lead to increased volatility and reduced liquidity in the fund's portfolio holdings. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Interest-rate risk is generally greater for longer-term bonds, and credit risk is greater for below-investment-grade bonds. Unlike bonds, funds that invest in bonds have fees and expenses. Lower-rated bonds may offer higher yields in return for more risk. Funds that invest in government securities are not guaranteed. Mortgage-backed securities are subject to prepayment risk and the risk that they may increase in value less when interest rates decline and decline in value more when interest rates rise. International investing involves currency, economic, and political risks. Emerging-market securities have illiquidity and volatility risks. The fund may not achieve its goal, and it is not intended to be a complete investment program. Risks associated with derivatives include increased investment exposure (which may be considered leverage) and, in the case of over-the-counter instruments, the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. The fund's efforts to produce lower-volatility returns may not be successful and may make it more difficult at times for the fund to achieve its targeted return. Under certain market conditions, the fund may accept greater-than-typical volatility to seek its targeted return. You can lose money by investing in the fund. The fund's prospectus lists additional risks.

**Request a prospectus or a summary prospectus, if available, from your financial representative or by calling Putnam at 1-800-225-1581. These prospectuses include investment objectives, risks, fees, expenses, and other information that you should read and consider carefully before investing.**

**Standard deviation** measures how widely a set of values varies from the mean. It is a historical measure of the variability of return earned by an investment portfolio. **Average effective duration** provides a measure of a fund's interest-rate sensitivity. The longer a fund's duration, the more sensitive the fund is to shifts in interest rates. **Average effective maturity** depends on the maturity of the underlying bonds within each fund. The longer the maturity, the greater the interest-rate risk.
