Putnam Emerging Markets Income Fund*

Pursuing high current income and diverse return opportunities across the emerging-market debt landscape

Improving fundamentals

Today, many emerging-market economies are better positioned than those of developed countries, given lower sovereign debt levels and faster economic growth.

Diversification benefits

Emerging-market debt as an asset class offers low correlation and can help add diversification to investments in a number of more traditional asset classes.

Active management

Putnam's veteran fund managers have experience investing in emerging markets using fundamental research and top-down macro analysis, and have the expertise to pursue attractive opportunities while mitigating unwanted risks.

Top ten issuers

Republic of Indonesia
Republic of Colombia
United Mexican States
Republic of South Africa
Republic of Turkey
Provincia Buenos Aires/Argentina
Petroleos Mexicanos
Russian Federation
Republic of Chile
Petroleo Brasileiro

Holdings in the top ten issuers represent 46.0% of the portfolio and will vary over time.

Currency exposure

United States dollar	62.9%
Polish zloty	6.3

Brazil	7.6
Indonesia	7.6
Colombia	7.1
Argentina	5.9
Turkey	5.9
Russia	5.2
Other countries	47.2

Growth of a \$10,000 investment

With dividends reinvested, the fund has returned an average of 2.1% annually since inception.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class Y shares assumes reinvestment of distributions and does not account for taxes. Class Y shares, available to investors through an asset-based fee program or for institutional clients, are sold without an initial sales charge and have no CDSC. For the most recent month-end performance, please visit putnam.com.

* The fund will close to new investors November 2, 2018 and will liquidate November 16, 2018.

Portfolio quality

AAA	0.1%
A	13.1
BBB	34.0
BB	26.2
B	22.9
CCC and below	0.4
Not rated	3.2

Credit qualities are shown as a percentage of the fund's net assets. A bond rated BBB or higher (A-3 or higher, for short-term debt) is considered investment grade. This chart reflects the highest security rating provided by one or more of Standard & Poor's, Moody's, and Fitch. To-be-announced (TBA) mortgage commitments, if any, are included based on their issuer ratings. Ratings may vary over time. Cash, derivative instruments, and net other assets are shown in the not-rated category. Payables and receivables for TBA mortgage commitments are included in the not-rated category and may result in negative weights. **The fund itself has not been rated by an independent rating agency.**

The Putnam Emerging Markets Income Blended Index is equally weighted between one third JPMorgan Emerging Markets Bond Index Global Diversified, one third JPMorgan Corporate Emerging Markets Bond Index Diversified, and one third JPMorgan Government Bond Index—Emerging Markets Global Diversified. You cannot invest directly in an index.

Lipper rankings for class Y shares are based on total return without sales charge relative to all share classes of funds with similar objectives as determined by Lipper.

Average effective duration provides a measure of a fund's interest-rate sensitivity. The longer a fund's duration, the more sensitive the fund is to shifts in interest rates.

Not all share classes are available on all platforms.

Consider these risks before investing: Bond prices may fall or fail to rise over time for several reasons, including general financial market conditions, changing market perceptions (including perceptions about the risk of default and expectations about monetary policy or interest rates), changes in government intervention in the financial markets, and factors related to a specific issuer or industry. These and other factors may lead to increased volatility and reduced liquidity in the fund's portfolio holdings. International investing involves currency, economic, and political risks. Emerging-market securities carry illiquidity and volatility risks. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Interest-rate risk is greater for longer-term bonds, and credit risk is greater for below-investment-grade bonds. Unlike bonds, funds that invest in bonds have fees and expenses. Risks associated with derivatives include increased investment exposure (which may be considered leverage) and, in the case of over-the-counter instruments, the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. The fund is considered non-diversified and can invest a greater portion of its assets in securities of individual issuers than can a diversified fund. As a result, changes in the market value of a single investment could cause greater fluctuations in share price than would occur in a more diversified fund. Emerging markets often do not provide legal remedies for bondholders comparable to those available to bondholders in the United States, and it may not be possible to dispose of bonds of distressed issuers. You can lose money by investing in the fund.
