Putnam Floating Rate Income Fund

An income fund that can benefit from higher interest rates

Floating-rate bank loans
The fund primarily invests in bank loans with yields that are set at a margin above short-term interest rates and adjust when rates change.

Guard against rising interest rates
Bank loans have historically performed well amid rising interest rates because their yields adjust higher and become more attractive.

Backed by team research
The fund’s experienced managers select a diverse range of loans using careful credit research.

Objective
The fund seeks high current income. Preservation of capital is a secondary goal.

Fund symbols
Class A  PFLRX
Class B  PFRBX
Class C  PPICX
Class R  PFLRX
Class R6 PFRZX
Class Y  PFRYX

Credit qualities are shown as a percentage of the fund’s net assets. A bond rated BBB or higher (A-3 or higher, for short-term debt) is considered investment grade. This table reflects the highest security rating provided by one or more of Standard & Poor’s, Moody’s, and Fitch. Ratings and portfolio credit quality will vary over time. Cash and net other assets, if any, represent the market value weights of cash, derivatives, and short-term securities in the portfolio. The fund itself has not been rated by an independent rating agency.

Diversification across market sectors
- Consumer cyclicals 24.4%
- Technology 18.1%
- Basic materials 11.1%
- Capital goods 9.1%
- Health care 7.3%
- Financials 5.6%
- Consumer staples 4.8%
- Energy 4.3%
- Communication services 4.1%
- Transportation 1.7%
- Utilities 1.7%
- Non-cash investments 2.4%
- Net cash 7.7%

Allocations may vary over time. Allocations may not total 100% of net assets because the table includes the notional value of derivatives (the economic value for purposes of calculating periodic payment obligations), in addition to the market value of securities.

Portfolio structure
- Bank loans 84.8%
- High-yield corporate bonds 8.8%
- Investment-grade corporate bonds 0.8%
- Emerging market bonds 0.3%
- Net cash 7.7%

Portfolio quality
- BBB 3.6%
- BB 35.4%
- B 51.5%
- CCC and below 1.6%
- Not rated 0.1%
- Net cash 7.7%

Holdings represent 100% of the portfolio and will vary over time.

Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance of class A and Y shares assumes reinvestment of distributions and does not account for taxes. After-sales-charge returns for class A reflect a maximum 2.25% load. Returns for class Y shares prior to their inception are derived from the historical performance of class A shares, which have not been adjusted for their lower expenses; had they, returns would have been higher. Class Y shares, available to investors through an asset-based fee program or for institutional clients, are sold without an initial sales charge and have no CDSC. For the most recent month-end performance, please visit putnam.com.

Morningstar rankings may differ significantly from Morningstar’s risk-adjusted star ratings. Past performance is not indicative of future results.

**Standard deviation** measures how widely a set of values varies from the mean. It is a historical measure of the variability of return earned by a fund. The longer the maturity, the greater the interest-rate risk. **Average effective duration** provides a measure of a fund’s interest-rate sensitivity. The longer a fund’s duration, the more sensitive the fund is to shifts in interest rates.

Not all share classes are available on all platforms.

**Consider these risks before investing:**

The value of investments in the fund’s portfolio may fall or fail to rise over extended periods of time for a variety of reasons, including general economic, political, or financial market conditions; investor sentiment and market perceptions; government actions; geopolitical events or changes; and factors related to a specific issuer, geography, industry, or sector. These and other factors may lead to increased volatility and reduced liquidity in the fund’s portfolio holdings.

Lower-rated bonds may offer higher yields in return for greater risk. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Interest-rate risk is generally greater for longer-term bonds, and credit risk is generally greater for below-investment-grade bonds. Unlike bonds, funds that invest in bonds have fees and expenses. Risks associated with derivatives include increased investment exposure (which may be considered leverage) and, in the case of over-the-counter instruments, the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. Floating-rate loans may reduce, but not eliminate, interest-rate risk. These loans are typically secured by specific collateral or assets of the issuer (so that holders of the loan, such as the fund, have a priority claim on those assets in the event of the issuer’s default or bankruptcy). The value of collateral may be insufficient to meet the issuer’s obligations, and the fund’s access to collateral may be limited by bankruptcy or other insolvency laws.

Our investment techniques, analyses, and judgments may not produce the outcome we intend. The investments we select for the fund may not perform as well as other securities that we do not select for the fund. We, or the fund’s other service providers, may experience disruptions or operating errors that could have a negative effect on the fund. You can lose money by investing in the fund.
