Current performance may be lower or higher than the quoted past performance, which cannot guarantee future results. Share price, principal value, and return will vary, and you may have a gain or a loss when you sell your shares. Performance assumes reinvestment of distributions and does not account for taxes. For the most recent month-end performance, please visit putnam.com. Class Y shares before their inception are derived from the historical performance of class A shares, which have not been adjusted for the lower expenses; had they, returns would have been higher. Performance for class Y shares of Putnam Mortgage Opportunities Fund before their inception is derived from the historical performance of class I shares, which have been adjusted for the higher operating expenses for such shares. For a portion of the periods, this fund may have had expense limitations, without which returns would have been lower. Class Y shares are generally only available for corporate and institutional clients and have no initial sales charge.

Consider these risks before investing: The value of investments in the fund's portfolio may fall or fail to rise over extended periods of time for a variety of reasons, including general economic, political, or financial market conditions; investor sentiment and market perceptions; government actions; geopolitical events or changes; and factors related to a specific issuer, geography, (such as a region of the United States), industry, or sector, such as the housing or real estate markets. Emerging-market securities carry illiquidity and volatility risks. Allocation of assets among fixed-income strategies may hurt performance. Investments in small and/or midsize companies increase the risk of greater price fluctuations. International investing involves currency, economic, and political risks. These and other factors may lead to increased volatility and reduced liquidity in the fund's portfolio holdings. Bond investments are subject to interest-rate risk (the risk of bond prices falling if interest rates rise) and credit risk (the risk of an issuer defaulting on interest or principal payments). Interest-rate risk is generally greater for longer-term bonds, and credit risk is generally greater for below-investment-grade bonds. Default risk is generally higher for non-qualified mortgages. Unlike bonds, funds that invest in bonds have fees and expenses. Lower-rated bonds may offer higher yields in return for more risk. Funds that invest in government securities are not guaranteed. Mortgage-backed investments, unlike traditional debt investments, are subject to prepayment risk, which means that they may increase in value less when interest rates decline and decline in value more when interest rates rise. Mortgage-and asset-backed securities are subject to prepayment risk. Risks associated with derivatives include increased investment exposure (which may be considered leverage) and, in the case of over-the-counter instruments, the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. The fund's efforts to produce lower-volatility returns may not be successful and may make it more difficult at times for the fund to achieve its targeted return. Under certain market conditions, the fund may accept greater-than-typical volatility to seek its targeted return. The fund is not intended to outperform stocks and bonds during strong market rallies. Our investment techniques, analyses, and judgments may not produce the outcome we intend. The investments we select for the fund may not perform as well as other securities that we do not select for the fund. We, or the fund's other service providers, may experience disruptions or operating errors that could have a negative effect on the fund. Our use of short selling may result in losses if the securities appreciate in value.

Putnam Ultra Short Duration Income fund is not a money market fund. The fund may not achieve its goal, and it is not intended to be a complete investment program. The fund's prospectus lists additional risks. You can lose money by investing in the fund.

The ICE BofA U.S. Treasury Bill Index is an unmanaged index that tracks the performance of U.S.-dollar-denominated U.S. Treasury bills publicly issued in the U.S. domestic market. Qualifying securities must have a remaining term of at least one month to final maturity and a minimum amount outstanding of \$1 billion. The ICE BofA U.S. Treasury Bill-ICE BofA 1-3 Year U.S. Corporate Linked Benchmark represents performance of the ICE BofA U.S. Treasury Bill Index from the inception date of the fund, December 23, 2008, through May 31, 2018, and performance of the ICE BofA 1-3 Year U.S. Corporate Index from June 1, 2018, and thereafter. You cannot invest directly in an index.

The ICE BofA 1-3 year U.S. Corporate Index is an unmanaged index of U.S. investment-grade corporate debt with a remaining term to maturity of less than 3 years.

The Bloomberg (BBG) Barclays U.S. Aggregate Bond Index is an unmanaged index of U.S. investment-grade fixed-income securities.
