

Putnam Investments Fixed Income Global Alpha Composite

Year	Gross of Fees Return (%)	Net of Fees Return (%)	Annual Benchmark Return (%)	Three year Standard Deviation of Composite (%) ¹	Three year Standard Deviation of Benchmark (%) ¹	Standard Deviation of Account Returns (%) ²	Composite Assets (millions)	Total Firm Assets (millions) ³	Number of Accounts
2016	3.66	3.11	0.48	3.45	0.05	N/A	576	109,728	≤5
2015	-1.32	-1.87	0.18	2.38	0.02	N/A	556	110,621	≤5
2014	1.31	0.74	0.16	2.12	0.02	N/A	788	120,093	≤5
2013	3.41	2.79	0.19	2.76	0.01	N/A	531	110,816	≤5
2012	7.61	6.96	0.25	2.88	0.01	N/A	410	98,926	≤5
2011	-2.32	-2.91	0.23	4.89	0.03	N/A	284	95,033	≤5
2010	5.83	5.12	0.27	N/A	N/A	N/A	291	102,320	≤5
2009	27.20	26.24	0.36	N/A	N/A	N/A	275	96,570	≤5
2008	-14.29*	-14.50*	0.97*	N/A	N/A	N/A	216	90,084	≤5

* The period from inception, September 1, 2008, to December 31, 2008, is not annualized.

1 The three-year, annualized ex-post standard deviation of monthly composite and benchmark returns represents a measure of total investment risk (volatility) and calculates the variance of a distribution of returns. Data is not presented for periods with less than 36 months of composite returns.

2 The standard deviation of comparable performance over time is a measure of volatility. Composite dispersion is measured by the standard deviation across equal weighted portfolios represented within the composite for the full year. Standard deviation is N/A for composites with five or fewer accounts for the full year.

3 Total Firm Assets prior to 2011 do not include Guaranteed Investment Contract ("GIC") assets.

Firm overview: Putnam Investments claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Putnam Investments has been independently verified from January 1, 2000, through December 31, 2016. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation. The verification reports are available upon request. Putnam Investments (the "Firm") is defined as a broad-based investment management organization that provides financial services to institutions and individuals through separately managed accounts, pooled funds, and mutual funds. Except for a minority stake owned by employees, the Firm is a wholly owned subsidiary of Great-West Lifeco Inc. Investment management is provided by four wholly owned subsidiaries of the Firm: The Putnam Advisory Company, LLC; Putnam Investment Management, LLC; Putnam Fiduciary Trust Company; and Putnam Investments Limited. A list of the Firm's composite descriptions is available upon request.

Composition of composite: The Putnam Investments Fixed Income Global Alpha Composite (the "Composite") seeks to provide an absolute return in excess of cash, as measured by 1-month Libor, over a full market cycle by investing in a diversified portfolio of global fixed income investments. The active risk will range between 200 and 600 bps. The management team pursues this objective by identifying multiple uncorrelated sources of alpha across all sectors and sub-sectors of the global fixed income market: sovereign (developed and emerging), credit (investment grade, high yield, bank loans, convertible bonds, and structured credit), and securitized (MBS, RMBS, CMBS, CMO, and ABS). In addition to security selection and sub-sector allocation, the team pursues excess returns through macro strategies, including currency, country, and global term structure. Derivatives are used to fine-tune portfolio strategies and hedge risk factors. The Composite comprises all fully discretionary accounts managed by Putnam in this style. Composite creation date was September 13, 2008.

The Composite was formerly called the Global Alpha Composite and prior to that the Absolute Return Fixed Income Composite. Leverage is not used in any account in the Composite. Derivatives, including futures, forwards, options, and swaps, may be utilized primarily for hedging purposes, but also in place of cash/physical securities in certain circumstances. Composites may include portfolios with certain existing investment restrictions that the Firm believes do not materially impact the investment strategy.

Risk considerations: The strategy's allocation of assets among fixed income sectors may hurt performance. The prices of bonds in your portfolio may fall or fail to rise over extended periods of time for a variety of reasons, including both general financial market conditions and factors related to a specific issuer or industry. The risks associated with bond investments include interest-rate risk, which means the prices of an investment is likely to fall if interest rates rise. Bond investments are also subject to credit risk, which is the risk that the issuers of an investment may default on payment of interest or principal. Interest-rate risk is generally greater for longer-term bonds, and credit risk is generally greater for below-investment-grade bonds ("junk bonds"). Mortgage-backed investments carry the risk that they may increase in value less when interest rates decline and decline in value more when interest rates rise. We may have to invest the proceeds from prepaid investments, including mortgage- and asset-backed investments, in other investments with less attractive terms and yields. International investments may carry risks associated with investing outside the United States, such as currency fluctuation, economic or financial instability, lack of timely or reliable financial information, or unfavorable political or legal developments. Those risks are increased for investments in emerging markets. Our use of derivatives may increase these risks by, for example, increasing investment exposure or, in the case of many over-the-counter derivatives, by being illiquid because of the potential inability to terminate or sell derivative positions. This strategy may not be suitable for all investors. It is important to understand that you can lose money by investing in this strategy.

Calculation of composite: Returns are presented in U.S. dollars ("USD"). Benchmark, Putnam account and Putnam mutual fund valuation sources and timing may sometimes differ, causing dispersion within the composite and between the composite and the benchmark. The results of the Composite for all periods shown include the reinvestment of dividends and other earnings. The Firm values securities using market quotations, fair value prices from pricing services and/or broker quotations. In limited circumstances, the Firm will value securities based solely on its own analysis, this may include using model prices based on third-party data or, for private equity securities, a fair valuation process

whereby a special Valuation committee will review the nature of each deal, the model currently used to value each deal, and any critical underlying assumptions in order to determine fair value. Fair valuations based on internal resources are made in accordance with the Putnam Funds Pricing Procedures and are subject to the oversight of the Firm's Valuation Committee. Please note that, in limited cases, the inputs used to value the security are unobservable and reflect the source's own assumptions. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

Benchmark disclosure: The Bank of America (BoFA) Merrill Lynch U.S. Dollar 1-Month LIBOR Constant Maturity Index tracks the performance of a synthetic asset-paying LIBOR to a stated maturity. The index is based on the assumed purchase at par of a synthetic instrument having exactly its stated maturity and with a coupon equal to that day's fixing rate. That issue is assumed to be sold the following business day (priced at a yield equal to the current day fixing rate) and rolled into a new instrument. Benchmarks are generally taken from published sources and may have different calculation methodologies, pricing times, and foreign exchange sources from the Composite. The effect of those differences is deemed to be immaterial. The securities holdings of the Composite may differ materially from those of the index used for comparative purposes. Indexes are unmanaged and do not incur expenses. You cannot invest directly in an index. The index data referenced herein is the property of Merrill Lynch, Pierce, Fenner & Smith Incorporated ("BofAML") and/or its licensors and has been licensed for use by Putnam Investments. BofAML and its licensors accept no liability in connection with its use. See <https://www.putnam.com/policies/> for a full copy of the Disclaimer.

Gross and Net of fees disclosure: Gross of Fee Returns are net of transactions costs but do not include the deduction of management fees and other expenses that may be incurred in managing an investment account. A portfolio's return will be reduced by management and other fees. The impact of management fees can be material. For instance, assume that \$1 million is invested in a Putnam Investments account, and this account achieves a 10% compounded annual return, gross of fees, for 10 years. If a management fee of 0.50% was charged each year for the 10-year period, the annual return would be 9.5% and the ending dollar value would be \$2,478,200, net of fees, as opposed to \$2,593,700, gross of fees. The actual fee rates are stated in advisory contracts with clients. For composites that contain U.S. mutual funds and UCITS funds, gross-of-fee performance is calculated by applying the prorated monthly percentage of the total net annual expense ratio (as published in the fund's annual report) to the monthly return on net asset value per share. Annual expense ratios for the current year may be based on the prior year's financial statements. Returns may be adjusted based upon each year's audited annual report.

Net of fee returns are calculated using a model fee ("Model Net Fee"). For the applicable time periods, net of fees returns reflect either the deduction of the highest management fee that is paid by a portfolio in the Composite during the performance period, applied on a monthly basis or the deduction of the highest applicable management fee in effect during the performance period that would be charged based on the fee schedule appropriate to this mandate, without the benefit of breakpoints, applied on a monthly basis, whichever is higher. Net of fee calculation methodology may change over time. For composites that include commingled funds that pay a performance fee and that calculate performance using the highest fee paid by an account in the composite, performance based fee adjustments are included in net of fee returns. For commingled funds, the fee is typically updated for the most recent fiscal year end after the portfolio has been audited. Returns may be adjusted based upon each year's audited annual report. Please be advised that the Composite may include other investment products or share classes of funds that are subject to management fees, including performance fees, that are inapplicable to you but that could have been in excess of the Model Net Fee. Therefore, the actual performance of all the portfolios in the composite on a net-of-fees basis will be different, and may be higher or lower, than the Model Net Fee performance. Composites that include certain commingled portfolios may also assess a performance fee to underlying investors which could result in the underlying investors paying a higher total management fee than the highest stated management fee below. However, Model Net Fee performance is intended to provide the most appropriate example of the impact management fees would have by applying management fees relevant to you to the gross performance of the Composite. Actual investment advisory fees incurred by clients are typically negotiated on an individual basis and may vary depending upon, among other things, the applicable fee schedule and portfolio size.

Fee schedule: The standard fee schedule is based on the market value of an account's assets under management and is stated on an annual basis. Separate account management fees are subject to change and are for investment management services only. Standard management fee is: 0.50% of assets on the first \$100 million, 0.45% of assets on the next \$150 million, 0.35% of assets on the next \$250 million, and 0.30% for assets over \$500 million.

Performance fee option: The Client shall pay the Investment Management Firm a Base Fee and an Incentive Fee. The Base Fee is a quarterly fee paid at an annual rate of 0.20% of the average daily asset value of the account. The Incentive Fee shall be paid annually and equal 15% of the net relative return over the benchmark for the period minus the prior loss carried forward since inception. A base fee option is also available upon request.

Past performance is not a guarantee of future performance. No assurance can be given as to future performance.
