2010	5.23	4.33	0.21	N/A	N/A	N/A	580	102,320	≤5
2009	16.76*	15.85*	0.31*	N/A	N/A	N/A	254	96,570	≤5

* The period from inception, February 1, 2009, to December 31, 2009, is not annualized.

1 The three-year, annualized ex-post standard deviation of monthly composite and benchmark returns represents a measure of total investment risk (volatility) and calculates the variance of a distribution of returns. Data is not presented for periods with less than 36 months of composite returns.

2 The standard deviation of comparable performance over time is a measure of volatility. Composite dispersion is measured by the standard deviation across equal weighted portfolios represented within the composite for the full year. Standard deviation is N/A for composites with five or fewer accounts for the full year.

3 Total Firm Assets prior to 2011 do not include Guaranteed Investment Contract ("GIC") assets.

Firm overview: Putnam Investments claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. Putnam Investments has been independently verified from January 1, 2000, through December 31, 2016. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation. The verification reports are available upon request. Putnam Investments (the "Firm") is defined as a broad-based investment management organization that provides financial services to institutions and individuals through separately managed accounts, pooled funds, and mutual funds. Except for a minority stake owned by employees, the Firm is a wholly owned subsidiary of Great-West Lifeco Inc. Investment management is provided by four wholly owned subsidiaries of the Firm: The Putnam Advisory Company, LLC; Putnam Investment Management, LLC; Putnam Fiduciary Trust Company; and Putnam Investments Limited. A list of the Firm's composite descriptions is available upon request.

Composition of composite: The Putnam Investments Multi-Asset Absolute Return Strategy Composite (the "Composite") seeks to earn a positive total return above Treasury Bills by 700 basis points on an annualized basis over a reasonable period of time (generally at least three years or more) regardless of market conditions. The strategy pursues a consistent absolute return by combining two independent investment strategies — a directional (beta) component, which provides broad exposure to investment markets, and a non-directional (alpha) component, which seeks returns from active trading strategies. The Composite comprises all fully discretionary accounts managed by Putnam in this style. The Composite's benchmark is the BofA Merrill Lynch U.S. Treasury Bill Index. Accounts in the Composite may use other cash benchmarks. The Composite creation date was March 17, 2009. The Composite was formerly called the Absolute Return 700 Composite.

The return objective is based on managing the strategy to a level of tracking error commensurate with the target return. The target return and standard deviation would result in a portfolio with a Sharpe ratio of 1. The target range is based on return expectations over the next market cycle for the asset classes typically represented in the strategy, including global equities, global bonds, commodities, REITS, and currencies. The strategy pursues these targets through investment across global bonds, stocks, or alternative asset classes and can adjust as opportunities change. Target returns represent results of statistical modeling and are provided for informational purposes only. Targets are presented for the purpose of communicating the intended risk profile of the investment opportunities that Putnam will pursue and are not intended to be projections of performance. Target returns are based on a number of assumptions, are subject to significant revision, and may change materially with changes in underlying observations.

Risk considerations: Our allocation of assets among permitted asset categories may hurt performance. The prices of stocks and bonds in your portfolio may fall or fail to rise over extended periods of time for a variety of reasons, including both general financial market conditions and factors related to a specific issuer or industry. Our active trading strategy may lose money or not earn a return sufficient to cover associated trading and other costs. This strategy may use futures, forwards, swaps, and other derivative instruments on equity, fixed income, and commodity indices and currencies to gain exposure to various markets. Commodities trading involves substantial risk of loss. There are additional risks involved with trading securities in a margin account, including the fact that you can lose more funds than you deposit in the margin account. Derivatives involve special costs and risks, such as the potential inability to terminate or sell derivatives positions and the potential failure of the other party to the instrument to meet its obligations. Some derivatives are "leveraged," which means that they provide a portfolio with investment exposure greater than the value of your portfolio's investment in the derivatives. As a result, these derivatives may magnify or otherwise increase investment losses to a portfolio. Strategies that use leverage to gain exposure to various markets may not be suitable for all investors. Any use of leverage exposes the strategy to risk of loss. In some cases, the risk may be substantial. This strategy may also sell securities short and may engage in securities lending. Selling short is a strategy employed by aggressive investors attempting to benefit from the expected price deterioration of a security and can lead to extraordinary losses. When engaging in the short sale of securities, the Firm will sell borrowed shares with the intent of repurchasing the shares at a lower price before returning the shares to the lender. A portfolio that engages in short sales may incur losses if the securities appreciate in value prior to repurchase. Also, such portfolios may experience greater volatility due to potential leverage. The loss involved in a short position is theoretically unlimited. Bond investments are subject to interest-rate risk and credit risk. Mortgage-backed securities are subject to prepayment risk. International investing involves certain risks, such as currency

Putnam Investments Multi-Asset Absolute Return Strategy Composite

fluctuations, economic instability, and political developments. Additional risks may be associated with emerging-market securities, including illiquidity and volatility. REITs involve the risks of real estate investing, including declining property values. Commodities involve the risks of changes in market, political, regulatory, and natural conditions. Investments in small and/or midsize companies increase the risk of greater price fluctuations. Growth stocks may be more susceptible to earnings disappointments, and value stocks may fail to rebound. The strategy may not achieve its goal, and it is not intended to be a complete investment program. The strategy's effort to produce lower-volatility returns may not be successful and may make it more difficult at time for the strategy to achieve its targeted return. In addition, under certain market conditions, the strategy may accept greater volatility than would typically be the case, in order to seek its targeted return. No assurance can be given that the investment objective or target return will be achieved or that an investor will receive a return of all or part of his or her investment. As with any investment, there is a potential for profit as well as the possibility of loss. This strategy may not be suitable for all investors. It is important to understand that you can lose money by investing in this strategy.

Calculation of composite: Returns are presented in U.S. dollars ("USD"). Benchmark, Putnam account and Putnam mutual fund valuation sources and timing may sometimes differ, causing dispersion within the composite and between the composite and the benchmark. The results of the Composite for all periods shown include the reinvestment of dividends and other earnings. The Firm values securities using market quotations, fair value prices from pricing services and/or broker quotations. In limited circumstances, the Firm will value securities based solely on its own analysis, this may include using model prices based on third-party data or, for private equity securities, a fair valuation process whereby a special Valuation committee will review the nature of each deal, the model currently used to value each deal, and any critical underlying assumptions in order to determine fair value. Fair valuations based on internal resources are made in accordance with the Putnam Funds Pricing Procedures and are subject to the oversight of the Firm's Valuation Committee. Please note that, in limited cases, the inputs used to value the security are unobservable and reflect the source's own assumptions. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

Benchmark disclosure: The Bank of America (BoFA) Merrill Lynch U.S. Treasury Bill Index is an unmanaged index that tracks the performance of U.S. dollar-denominated U.S. Treasury bills publicly issued in the U.S. domestic market. Qualifying securities must have a remaining term of at least one month to final maturity and a minimum amount outstanding of \$1 billion. Benchmarks are generally taken from published sources and may have different calculation methodologies, pricing times, and foreign exchange sources from the Composite. The effect of those differences is deemed to be immaterial. The exchange rate source of the benchmark and the Composite is Reuters. The securities holdings of the Composite may differ materially from those of the index used for comparative purposes. Indexes are unmanaged and do not incur expenses. You cannot invest directly in an index. The index data referenced herein is the property of Merrill Lynch, Pierce, Fenner & Smith Incorporated ("BoFAML") and/or its licensors and has been licensed for use by Putnam Investments. BoFAML and its licensors accept no liability in connection with its use. See <https://www.putnam.com/policies/> for a full copy of the Disclaimer.

Gross and Net of fees disclosure: Gross of Fee Returns are net of transactions costs but do not include the deduction of management fees and other expenses that may be incurred in managing an investment account. A portfolio's return will be reduced by management and other fees. The impact of management fees can be material. For instance, assume that \$1 million is invested in a Putnam Investments account, and this account achieves a 10% compounded annual return, gross of fees, for 10 years. If a management fee of 0.50% was charged each year for the 10-year period, the annual return would be 9.5% and the ending dollar value would be \$2,478,200, net of fees, as opposed to \$2,593,700, gross of fees. The actual fee rates are stated in advisory contracts with clients. For composites that contain U.S. mutual funds and UCITS funds, gross-of-fee performance is calculated by applying the prorated monthly percentage of the total net annual expense ratio (as published in the fund's annual report) to the monthly return on net asset value per share. Annual expense ratios for the current year may be based on the prior year's financial statements. Returns may be adjusted based upon each year's audited annual report.

Net of fee returns are calculated using a model fee ("Model Net Fee"). For the applicable time periods, net of fees returns reflect either the deduction of the highest management fee that is paid by a portfolio in the Composite during the performance period, applied on a monthly basis or the deduction of the highest applicable management fee in effect during the performance period that would be charged based on the fee schedule appropriate to this mandate, without the benefit of breakpoints, applied on a monthly basis, whichever is higher. Net of fee calculation methodology may change over time. For composites that include commingled funds that pay a performance fee and that calculate performance using the highest fee paid by an account in the composite, performance based fee adjustments are included in net of fee returns. For commingled funds, the fee is typically updated for the most recent fiscal year end after the portfolio has been audited. Returns may be adjusted based upon each year's audited annual report. Please be advised that the Composite may include other investment products or share classes of funds that are subject to management fees, including performance fees, that are inapplicable to you but that could have been in excess of the Model Net Fee. Therefore, the actual performance of all the portfolios in the composite on a net-of-fees basis will be different, and may be higher or lower, than the Model Net Fee performance. Composites that include certain commingled portfolios may also assess a performance fee to underlying investors which could result in the underlying investors paying a higher total management fee than the highest stated management fee below. However, Model Net Fee performance is intended to provide the most appropriate example of the impact management fees would have by applying management fees relevant to you to the gross performance of the Composite. Actual investment advisory fees incurred by clients are typically negotiated on an individual basis and may vary depending upon, among other things, the applicable fee schedule and portfolio size.

Fee schedule: The standard fee schedule is based on the market value of an account's assets under management and is stated on an annual basis. Separate account management fees are subject to change and are for investment management services only. Standard management fee is: 0.75% of assets on the first \$50 million, 0.70% of assets on the next \$50 million, 0.60% of assets on the next \$150 million, 0.50% of assets on the next \$250 million, and 0.25% for assets over \$500 million.

Past performance is not a guarantee of future performance. No assurance can be given as to future performance.
